                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes the light chain variable region of a preferred anti-CD4 monoclonal antibody for use in the claimed synergistic composition. MAD WT 15.1 is deposited as clone 15-1/p3/14 (ECACC a)0090705). The anti-CD4 antibody is used with at least one anti-IL2R alpha or beta antibody. Individually the antibodies are strongly inhibiting and when used together their immunosuppressive properties are improved; they synergistically inhibit transplant rejection at low doses without significantly reducing the general immune response. See AAQ45663 for the heavy-chain coding sequence. The antibody is specific for the GPIIa/IIIb protein and inhibits platelet agglutination. The Ig is thus useful in the treatment of thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  contg. immunoglobulin specific for the GP-IIB and -IIIA - for treating disorders related to vascular thrombosis

The hybridoma produced a monoclonal antibody (SCH94.03) useful in promoting CNS remyelination. The SCH94.03 light chain germline sequence is given in AAT05311.

                                                                                                                                                                                                                         This is the nucleotide sequence of the mouse antibody C4G1 light chain, used in the method of the invention involving the creation of a humanised immunoglobulin (1g) derived from the mouse C4G1 antibody. The humanised Ig capable of binding to GDID/IIIa and inhibiting platelet aggregation and also the releasing reaction of platelets. The Ig can be used for treating cardiovascular diseases and thromboembolic disorders, e.g. acute myocardial infarction, unstable angina, stroke, transient ischemic episodes, deep vein thrombosis and pulmonary embolism, extracorporeal cardiopulmonary circulation. The Ig can also be used in diagnoshing the presence and location of a thrombus, or certain types of cancer cells which develop GPID/IIIa on their surfaces, for the detection of GPID/IIIa antigness or for isolating platelets. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GAAGATATTGCCACTTACTTTTGCCAACAGGGTAATACGCTTCCGTGGACGTTCGGTGGA 360

This cDNA encodes the light chain of the mouse antibody F919-9-18. This is used for generating a mouse anti-human Fas ligand monoclonal antibody. The invention provides the use of Fas antegonist as an agent for the treatment and prevention of apoptosis-related diseases. The Fas antagonist can be a partial Fas antigen peptide containing the extracellular part of the protein, but lacking the signal sequence, an anti-Fas antibody, or an anti-Fas ligand antibody, where the antibody is preferably a humanised antibody. The Fas antagonist is used in the treatment and prevention of diseases such as myocardial infarction, heart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                failure, ischemic heart disease, acute kidney failure, graft-versus-host disease, ischemic restenoais of the heart, liver or kidney, and endotoxic shock, and also as an organ preservative in transplantation. The agent is of low toxicity but effectively inhibits the Fas/Fas ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 ATGATGTCCTCTGCTCGAGTTCCTTGGTCTCCTGTTGTTTTCAAGGTACCAGATGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibody reactive with Fas ligand capable of inducing apoptosis - used for diagnostic assay of Fas ligand in body fluids and for treatment of diseases in which Fas ligand/Fas antigen is involved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           anti-apoptosis inducing human Fas ligand, monoclonal antibody, F919. The antibody can be used in a Fas ligand assay, e.g. an enzyme linked immunosorbant assay, to diagnose diseases in which the Fas ligand/Fas antigen system is implicated, e.g. hepatitis B/C, human immunodeficiency virus, graft/host disorders, ulcerative collitis or sequelae of myocardial infarction. The antibody may also be used to treat such diseases.

matrix interactions caused by alphaV integrin; which blocks tumo development and which has no cytotoxic activity, may be used to treat tumours, especially melanoma (but also glioma, carcinoma) optionally coupled to a cytokine such as interleukin-2. The monoclonal antibody may also be used for diagnostic imaging of tumours and assesment of tumour growth when conjugated to a radio opaque-agent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A cDNA clone (AAT43440) codes for the light chain variable region the way of the oligo-dC tail to the Jkappa jucketong from the oligo-dC tail to the Jkappa jucketion. It was obtd. from an ME4 hybridoma cDNA library by screening with a mouse C kappa region probe. MAD ME4 (IgG1) binds to an antigen that is expressed on the surface of human melanoma and lung, breast, colon and ovary carcinomas, but not on most normal adult tissues. Heavy chain and light chain variable region (see also AAT4334-43) sequences can be used with human constant region sequences to express mouse-human chimeric antibodies in transformed host cells. The antibodies have specificity to human tumour antigens and can be used for human cancer treatment and diagnosis.

                                                                                                                                                                                                                                                                                                                       Shown is the nucleotide sequence from the end of the oligo-dC tail to the Jkl-Ck junction. The sequence is used in the prodn. of a chimeric antibody mol. comprising two light chains and two heavy chains, each having a constant region (human) and variable region (murine) having specificity to an antibodies can be used for any purpose for which the original murine Mabs can be used, with the advantage that they are more compatible with the human body. They are esp. used for the diagnosis and treatment of cancer.

The sequence was used to create chimeric mouse-human immunoglobulins which recognise the human tumour antipen bound by antibody IMC1 (produced by hybridoma cell line ATCC HB 9812). The chimeric antibodies also have an antigen-binding site that competitively inhibits the binding of antibody IMG-1, and mediate complement-dependent cytolysis of target cells or

The invention describes an antibody comprising a human constant region and a variable region having specificity for the human tumour antigen bound by the ING-1 antibody, where the ING-1 is produced by cell line (HB9812 as deposited with ATCC, and the antibody has the same affinity as the ING-1 for the human tumour antigen. The antibody is useful in an immunoassay method for detecting an antigen in a sample by contacting a label detectable entigen in the sample with the antibody, detecting the label and relating the detected label to the presence of the antigen; or suspected of containing the antibody with a part of the animal subject of the antigen; and the presence of the antigen in an animal by contacting the antibody with a part of the animal effected label to the presence of the antigen; and for killing cells carrying an antigen by contacting the cells with the antibody and clarying the killing to cocur. The antibodies are useful in tumour diagnosis and therapy. The chimeric antibodies bind to the surface of human tumour cells but do not bind detectably to normal cells, e.g., fibroblasts, endothehial cells or epithelial cells in the major organs. The high biological activity of the chimeric antibodies against human tumour cell lines combined with minimal reactivity with normal tissues implant the man and the man and the contaction of the chimeric in the detection of the minimal reactivity with normal tissues implants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        malignant tissue. The presence of human rather than murine antigenic determinants on the chimeric antibodies increases their resistence to rapid clearance from the body relative to the original murine mAbs. This resistance to clearance enhances the potential utility of these chimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 ATGGTGTCCTCAGCTCAGTTCCTTGGTCTCCTGTTGCTCTGTTTTCAAGGTACCAGATGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequences given in AAQ30759 and AAQ31337 were used in example to illustrate the production of a human antibody which recognises human interleukin-6 receptor (IL-6R). The antibody comprises light (L) chain and heavy (H) chain variable regions which were derived from a mouse monoclonal antibody produced from the hybridoma AUK146-15 which (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 ATGGTGTCCTCAGCTCCTTGGTCTCCTGTTGCTCTGTTTTCAAGGTACCAGATGT

                                                                                                                                                       The present sequence encodes the light chain variable region of the murine anti-human interleukin 5 receptor alpha chain (NIL-5R alpha) monoclonal antibody (MAD) KM1259. KM1259 is produced by the hybridoma FERM BP-5134, which was prepared by immunising Balb/c mice with HIL-5R alpha, fusing spleen cells obtained from the mice with mouse myeloma P3-U1 cells and screening the resultant hybridomas. The MAD can be used to detect or assay for hIL-5R alpha and cells expressing it on their surface, especially to diagnose allergic respiratory diseases, e.g. chronic bronchitis. It can also be used

                                                                                                                               This sequence encodes the light (kappa) chain variable (V) region of a mouse monoclonal antibody (MAb), 1C11, specific for an HIV-1 viral antigen. It is used in the construction of a chimeric MAb comprising heavy and light chains having murine V regions and human C regions. The chimeric MAbs are more effective than murine MAb IC11 since they have an increased compatibility in humans. The heavy and light chain V-regions are joined by manipulating their respective joining (J) regions, to generate restriction enzyme conjugates, in association with e.g. toxins for HIV treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (http://www.jax.org/resources/documents/dhares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pw02 (gi|4732114|gb|RR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL110-Gold (Stratagene) cells and selected for ampicillin resistance."
